- 0.5% or more but not more than 1.9% of manganese, and
- 0.6% or more but not more than 2.3% of silicon, but no other element in a proportion that would give the steel the characteristics of another alloy steel.

2. For the classification of Ferro-alloys in the sub-headings of heading 7202 the following rule should be observed:

A Ferro-alloy is considered as binary and classified under the relevant sub-heading (if it exists) if only one of the alloy elements exceeds the minimum percentage laid down in Chapter Note 1(c); by analogy, it is considered respectively as ternary or quaternary if two or three alloy elements exceed the minimum percentage.

For the application of this rule the unspecified “other elements” referred to in Chapter Note 1(c) must each exceed 10% by weight.

SUPPLIMENTARY NOTES:

1. Skelp means hot- rolled narrow strip of width not exceeding 600 mm with rolled (square, slightly round or bevelled) edge.
 2. Ferrous metals clad with another ferrous metal are to be classified as products of the ferrous metal predominating by weight.
 3. Iron and steel products obtained by electrolytic deposition, by pressure casting by sintering are to be classified, according to their form, their composition and their appearance, in the headings of this chapter appropriate to similar hot - rolled products.
